After 10+ years at Appfire and BigPicture, I am open to new opportunities as a UX Orchestrator and AI-UX Transformation Leader. Standard design ops no longer cut it — over the past year I have engineered AI-driven pipelines and agentic workflows that revolutionize how digital products get built.

By deploying specialized AI agents, I streamlined the end-to-end UX lifecycle and boosted operational efficiency by ~65% vs. traditional frameworks. I don't just implement tools; I orchestrate organizational change — transitioning legacy design teams into AI-augmented powerhouses with KPI frameworks, agent output benchmarking, design system integrity, and human-in-the-loop feedback loops that continuously refine how teams work.
